Save thousands of dollars per software developer annually with Find it EZ

KELOWNA, British Columbia, Canada, March 5, 2011 – Bits n' Bytes Software Inc. has released Find it EZ, a software developer's search engine that makes it simple to locate every reference to every variable, table, or column name in your entire application. By knowing the exact location and inter-relation of every instance of every element across all parts of an application, programmers can create much more accurate estimates of the size, scope, and cost of proposed modifications. Find it EZ eliminates cost overruns that are caused by underestimating the number of places in an application that need to be modified whenever new specifications are proposed.

Find it EZ empowers the development team with the ability to **pinpoint the full impact of every software change request**, across all components (the core program, the database and reports). The software works **with all popular programming languages, including *.net, C/C++, JAVA, VB, JavaScript, Delphi, ASP, JSP, HTML, XML, PHP, Perl, and LUA**.

Find it EZ works with popular databases, including Microsoft SQL Server, Oracle, IBM DB2, MySQL, Access as well as cloud databases SQL Azure and Amazon RDS. Find It EZ's relational database scanning features support searching schema definitions, table data and SQL code (triggers, stored procedures, UDFs and views). **It also works with Crystal Reports, Active Reports, and SSRS**.

At the planning stage, programmers receive a complete picture of the consequences of a modification, rather than encountering a series of surprises during testing. The modification process is better controlled, with speedier, more reliable results.

For a DBA, code reviews have never been easier. Whether you are supporting a single relational database, or a mixed environment with multiple database suppliers, Find it EZ lets you scan all triggers, stored procedures, views, and user-defined functions in a single search request. It finds every place that the target phrase is used, including embedded SQL calls and SELECT statements that may be hidden within Crystal Reports formulas or embedded within C#.net, ASP, JAVA or JSP source code files. This information makes it much easier for software engineers to perform thorough impact analysis, and adds to the quality of the code that is produced.

Find it EZ runs as a stand-alone Windows application, includes a highlighted viewer to see matches in full context, and provides one-click integration with your all of your favorite development tools so you can get right to work on a change. The software supports boolean, wildcard, and REGEX search engine syntax, and includes a number of filtering options to reduce false positive matches in your scan results. Change lists produced are concise, accurate and thorough.

Whether you're an application software development manager who needs to provide the team with professional tools to produce accurate estimates and create high-quality code, a software maintenance manager who needs to isolate and fix defects fast, or a business manager who wants the IT department to be working with tools that enable them to accurately project costs, increase overall productivity and save 100s of impact analysis hours throughout the product life cycle, Find it EZ has the tools that you need. Find it EZ runs under Windows 7/2008/Vista/2003/XP/2000 and requires Microsoft .NET Framework 2.0. A single-user license is available for $248. Multi-user discounts are available. You can download a fully-functional 14-day trial version from the company's product site - Click Here

About Find it EZ Software Corp.

Founded in 2010, Find it EZ creates productivity tools for software developers. Whenever changes are planned or made to the underlying database in any software application, it can be a challenge to find all referenced code that can be affected. Normally, each software layer or programming language would require time-consuming and disconnected analysis with a variety of independent tools. Find it EZ provides a full 360 degree view of the entire code-stack in a single integrated application. Case studies have shown that companies like Westinghouse, Sprint, The Mayo Clinic and Pan American Life Insurance, using solutions from Find it EZ to manage their software changes, have increased their productivity by 42% or more. Find it EZ Code Search received a Microsoft award for innovation in 2011.
